

NOVERA — Screening Report

Hussain · generated 28 Jul 2026, 19:29

Biomarker readings

Biomarker	Value	Reference
pH	6.77	6.2–7.6
Creatinine	0.43 mg/dL	0.6–1.3 mg/dL
Urea	27.5 mg/dL	7.0–20.0 mg/dL
Temperature	36.2 °C	36.1–37.2 °C

Health area analysis

Health area	Status	Severity	Key finding
Kidney Health	concern	8	Kidney Health markers are outside the reference range.
Hydration	concern	8	Hydration markers are outside the reference range.
Oral Health	normal	1	Oral Health markers are within range.
Digestive Health	normal	1	Digestive Health markers are within range.

■ A clinical threshold was crossed — professional follow-up is recommended.

What this means

Hi Hussain, here's what your screening shows.

Two areas need a bit of attention: your kidneys and hydration levels. These are closely connected — when your body isn't well hydrated, your kidneys have to work harder to filter waste, which can push their markers outside the healthy range. So the good news is that improving your water intake may help support both areas at once.

On the positive side, your oral health and digestive health are right where they should be — no concerns there.

The key takeaway is to focus on staying consistently hydrated throughout the day. Small, steady changes — like carrying a water bottle and sipping regularly — can make a real difference for your kidneys over time. It's worth keeping an eye on these numbers in your next check-in to see how they respond.

Your self-care plan

****Personalized Self-Care Plan for Hussain****

****Today (1–2 Actions)****

- Drink at least 2–3 litres of water throughout the day to address low hydration intake. Carry a reusable bottle as a reminder.
- Replace your morning coffee with a glass of water or herbal tea to reduce caffeine's diuretic effect on kidney and hydration markers.

****This Week (2–3 Habits)****

- Aim for consistent hydration: set hourly reminders to sip water, targeting pale-yellow urine as a simple

indicator of adequate intake.

- Reduce moderate carb portions slightly and increase water-rich foods (cucumber, watermelon, celery) to support kidney function and fluid balance.
- Maintain your 2-hour exercise routine but add an extra 500 ml of water before and after sessions to compensate for fluid loss through sweat.

****Retest****

- Schedule your next kidney and hydration readings in ****4–6 weeks**** to assess whether increased water intake and dietary adjustments have brought markers back within range.
