

NOVERA — Screening Report

Hussain · generated 28 Jul 2026, 18:53

Biomarker readings

Biomarker	Value	Reference
pH	6.77	6.2–7.6
Creatinine	0.43 mg/dL	0.6–1.3 mg/dL
Urea	27.5 mg/dL	7.0–20.0 mg/dL
Temperature	36.2 °C	36.1–37.2 °C

Health area analysis

Health area	Status	Severity	Key finding
Kidney Health	watch	3	Urea levels are slightly elevated, which may be linked to your low water intake.
Hydration	watch	4	Creatinine levels are below the reference range, often indicating low hydration levels.
Oral Health	normal	0	Salivary pH is within the optimal range for oral health.
Digestive Health	normal	0	No significant biomarkers were detected to indicate digestive concerns.

■ A clinical threshold was crossed — professional follow-up is recommended.

What this means

Hussain, here's a summary of your screening results:

Your hydration levels are a bit low, which is showing up in your results. This is actually connected to your kidney health — when you're not drinking enough water, your kidneys can struggle to flush waste efficiently, which is why your urea levels came back slightly elevated. The good news is that both of these are very manageable with simple changes.

On the positive side, your oral health looks great — your salivary pH is right where it should be

Your self-care plan

Personal Self■Care Plan – Hussain

(English – 28 yrs, coffee lover, moderate carbs, 2 h daily exercise)

Today

- **Hydrate** – Start the day with **250 ml of water** before your coffee.
- **Coffee swap** – Replace one cup of coffee with **herbal tea** or a **water■infused** beverage (e.g., cucumber■mint water) to reduce diuretic effect.

This Week

- **Daily water goal** – Aim for **2 L of water** spread evenly (e.g., 500 ml every 3 h).

2. **Coffee limit** – Keep coffee to **≤ 2 cups/day**; alternate with water or decaf.
3. **Track intake** – Use a simple app or a notebook to log water and coffee consumption each day.

Retest

- **Next reading**: Schedule a repeat check in **4 weeks** (or sooner if you notice increased fatigue, dark urine, or swelling).
- **What to look for**: Urea and creatinine trends, and overall hydration status.

Quick Tips

- Carry a reusable bottle; refill it at work or during workouts.
- After exercise, drink **200 ml of water** before your next meal.
- If you feel thirsty or your urine is dark, increase fluid intake immediately.

This plan focuses on simple, sustainable habits to support kidney health and hydration without medication.
Good luck, Hussain!
